

IT Company Website — PDR

Web Development Internship Project

Project Type: Corporate IT / Technology Company Website

Difficulty: Intermediate–Advanced

Recommended Duration: 10–14 Days

Development Mode: Individual / Assigned Team

1. Project Objective

Develop a modern, professional and responsive **IT Company Website** that presents the company's services, products, expertise, projects, team and business information while generating qualified enquiries.

The website should follow a real-world corporate website structure:

Discover Company → Explore Services → View Solutions → See Work → Build Trust → Submit Enquiry

The project should demonstrate:

- Professional UI/UX
 - Responsive design
 - Modern frontend development
 - JavaScript interactions
 - Service filtering
 - Portfolio/project showcase
 - Contact and lead-generation forms
 - Careers section
 - Blog/resources
 - Basic SEO
 - Performance optimization
-

2. Project Scenario

Company

TechNova Solutions

Business Type

IT Services & Software Development Company

Services

- Website Development
- Web Application Development
- Mobile App Development
- SaaS Development
- UI/UX Design
- Cloud Solutions
- CRM Development
- ERP Development
- API & Integrations
- Automation
- Digital Marketing
- IT Consulting

All company information, statistics, clients and projects used by interns should be **fictional/demo content** unless actual data is provided.

3. Website Pages

Minimum required pages:

1. Home
2. About Us
3. Services
4. Service Details
5. Solutions
6. Industries
7. Portfolio / Case Studies
8. Case Study Details
9. Products
10. Product Details
11. Technologies

- 12. Team
 - 13. Careers
 - 14. Blog
 - 15. Contact
 - 16. FAQ
-

4. Home Page

The homepage should communicate the company's value proposition immediately.

Header

Include:

- Company logo
- Navigation
- Services
- Solutions
- Industries
- Portfolio
- About
- Contact
- CTA

Navigation example:

Home | Services | Solutions | Industries | Portfolio | About | Careers | Contact

Primary CTA:

Start a Project

5. Hero Section

Create a strong technology-focused hero section.

Example:

Building Digital Solutions for Growing Businesses

Short description:

We design and develop websites, applications and software solutions that help businesses operate, scale and connect with their customers.

Buttons:

Explore Services

Start a Project

Optional:

- Technology visual
- Animated background
- Product mockup
- Dashboard preview

Avoid excessive animation.

6. Company Statistics

Display sample/demo statistics:

100+
Projects

50+
Clients

20+
Technologies

5+
Years Experience

These should be labelled as demo data if they do not represent a real company.

7. About Company Preview

Include:

- Company introduction
- Mission
- Vision
- Core values
- Short company history
- CTA

Example:

Turning Ideas Into Digital Products

Short description followed by:

Learn More

8. Services Section

Create a professional services grid.

Example:

Web Development

Corporate websites, portals and web applications.

Mobile App Development

Android, iOS and cross-platform applications.

SaaS Development

Scalable software-as-a-service products.

UI/UX Design

User-focused interfaces and digital experiences.

Cloud Solutions

Cloud infrastructure, deployment and integrations.

Enterprise Software

Custom ERP, CRM and business management platforms.

Each service card should include:

- Icon
 - Service name
 - Description
 - View Details
-

9. Services Page

Create a complete service directory.

Categories:

Development

Design

Cloud

Business Software

Automation

Consulting

Marketing

Each service should include:

- Overview
 - Key features
 - Process
 - Technologies
 - Benefits
 - Related projects
 - CTA
-

10. Service Details Page

Every major service should have its own page.

Example:

Web Application Development

Include:

Overview

Description of the service.

What We Build

- Business portals
- Customer portals
- Dashboards
- Management systems
- SaaS applications
- Internal tools

Development Process

Discovery

Planning

UI/UX

Development

Testing

Deployment

Support

CTA

Discuss Your Project

11. Solutions Section

Create business-focused solutions.

Example:

- CRM Solutions
- ERP Solutions
- School Management
- Real Estate Software
- Restaurant Management
- HR Management
- Inventory Management
- Business Analytics
- Automation Solutions

Each solution should contain:

- Problem
 - Solution
 - Features
 - Benefits
 - Technologies
 - CTA
-

12. Industries Page

Show industries served.

Example:

- Healthcare
- Education
- Real Estate
- Retail
- Restaurants
- Finance
- Manufacturing
- Logistics
- Startups
- Professional Services

Each industry card should link to a dedicated section/page.

13. Portfolio / Case Studies

Create a portfolio showcasing completed projects.

Each card should include:

- Project image
- Project name
- Industry
- Services
- Technologies
- Short description
- View Case Study

Example:

SmartCampus

Education

Technology:

React | PHP | MySQL

14. Case Study Details

Create a detailed project page.

Sections:

Project Overview

Client Challenge

Proposed Solution

Development Process

Features

Technologies

Screenshots

Project Outcome

Related Projects

CTA

Avoid fabricated business results such as "increased revenue by 300%" unless supplied as real data. Demo projects should use clearly fictional/sample outcomes.

15. Technologies Page

Create a technology stack page.

Frontend

- HTML
- CSS
- JavaScript
- React
- Vite

Backend

- PHP
- Laravel
- Node.js

Database

- MySQL
- PostgreSQL

Mobile

- Flutter
- React Native

Cloud

- AWS
- Azure
- Google Cloud

Tools

- Git
- GitHub
- Figma
- Docker

Interns can create technology cards with:

- Technology logo
 - Technology name
 - Short description
 - Category
-

16. Products Page

Create a section for the company's software products.

Each product card:

- Product logo
- Product screenshot
- Product name
- Description
- Key features
- Industry
- CTA

Example:

BusinessFlow CRM

Customer Relationship Management Platform

Features:

- Leads
- Contacts
- Sales Pipeline
- Reports
- Notifications

Button:

Explore Product

17. Team Page

Create an employee/team directory.

Each profile:

- Photo
- Name
- Designation
- Department
- Short bio
- LinkedIn/social link

Example:

Arjun Kumar

Senior Software Engineer

18. Careers Page

Create a professional careers section.

Why Work With Us

Include:

- Learning
- Projects
- Mentorship
- Flexible environment
- Career growth

Job Listings

Each job card should contain:

- Position
- Department
- Location
- Employment type
- Experience
- Skills
- Apply button

Example:

Frontend Developer Intern

Remote | Internship | 0–1 Years

19. Job Details Page

Include:

- Job title
- Location
- Employment type
- Experience
- Job description
- Responsibilities
- Required skills
- Preferred skills
- Benefits
- Application form

Application Form

Name
Email
Phone
Resume
LinkedIn
Portfolio
Cover Letter

20. Contact Page

Create a lead-generation contact page.

Include:

- Company address
- Email
- Phone
- Working hours
- Map
- Social media

Contact Form

Full Name
Company Name
Email
Phone
Service Required
Budget Range
Project Timeline
Message

CTA:

Submit Enquiry

21. Project Enquiry Form

Create a dedicated **Start a Project** page.

Step 1 — Project Type

Website
Web Application
Mobile App
SaaS
CRM
ERP
Automation
Other

Step 2 — Requirements

- Project description
- Required features
- Target users

Step 3 — Budget

Under ₹50K
₹50K–₹1L
₹1L–₹5L
₹5L+
Not Decided

Step 4 — Timeline

Urgent
1–2 Months
2–4 Months
4+ Months
Not Decided

Step 5 — Contact Details

- Name
- Email
- Phone
- Company

The form should show a confirmation after submission.

22. FAQ

Create an accordion-based FAQ section.

Example questions:

What services does the company provide?

How does the development process work?

How long does a project take?

Do you provide maintenance?

Can you build custom software?

Do you work with startups?

Do you provide hosting?

Can you integrate third-party APIs?

23. Blog / Resources

Create a technology blog.

Categories:

- Web Development
- Mobile Development
- SaaS
- AI
- Cloud
- Business Technology
- UI/UX

Each article:

- Cover image
- Title
- Author
- Date
- Category

- Reading time
 - Content
 - Related posts
-

24. Newsletter

Add newsletter subscription.

Fields:

Email

Button:

Subscribe

Display success/error states.

25. JavaScript Requirements

Mandatory

- Mobile navigation
- Service filtering
- Portfolio filtering
- Technology filtering
- FAQ accordion
- Form validation
- Career job filtering
- Search
- Modal interactions
- Smooth scrolling
- Dynamic counters

Optional Advanced

- Project cost estimator
- Service configurator

- Multi-step project enquiry
 - Blog search
 - Dark mode
 - Interactive technology map
 - Animated case-study timeline
-

26. Project Cost Estimator — Advanced

Create an optional interactive estimator.

Inputs:

Project Type

Website

Mobile App

SaaS

CRM

ERP

Custom Software

Features

User selects features such as:

- Authentication
- Admin Dashboard
- Payment Gateway
- API Integration
- Notifications
- Analytics
- Multi-language
- Mobile App

The system should display an **estimated project range** based on predefined demo values.

Important:

The estimator must clearly state that the result is a demo estimate and not a quotation.

27. Responsive Design

The website must work correctly on:

- Mobile
- Tablet
- Laptop
- Desktop

Test:

- Navigation
 - Hero
 - Service cards
 - Case studies
 - Technology cards
 - Forms
 - Job listings
 - Blog
 - Footer
-

28. Accessibility Requirements

Implement:

- Semantic HTML
 - Keyboard navigation
 - Proper labels
 - Alt text
 - Focus states
 - Accessible buttons
 - Good color contrast
 - Descriptive links
-

29. SEO Requirements

Every important page should have:

- Unique title
- Meta description
- H1
- Proper H2/H3 hierarchy
- Image alt text
- Canonical URL
- Favicon
- Open Graph metadata

Optional:

- Organization structured data
 - Service structured data
 - Article structured data
 - Breadcrumb structured data
-

30. Performance Requirements

The intern should:

- Optimize images
 - Lazy-load images
 - Minimize unnecessary JavaScript
 - Optimize CSS
 - Compress assets
 - Use modern image formats
 - Avoid unnecessary dependencies
 - Optimize mobile loading
-

31. Backend Requirements

For advanced interns:

Frontend

- HTML5
- CSS3
- JavaScript

- Bootstrap / Tailwind CSS

Backend

- PHP

Database

- MySQL
-

32. Suggested Database

users
services
service_categories
industries
projects
project_images
technologies
products
team_members
jobs
job_applications
blog_posts
faqs
enquiries
newsletter_subscribers

Enquiries Table

id
name
company
email
phone
service
budget
timeline
message
status
created_at

Possible status:

New
Contacted
Qualified
Proposal Sent
Converted
Closed

33. Admin Panel — Advanced

Create a simple CMS-style admin dashboard.

Dashboard

Display:

Total Enquiries
New Leads
Projects
Services
Job Applications
Blog Posts

Services Management

- Add
- Edit
- Delete
- Publish/unpublish

Portfolio Management

- Add project
- Upload screenshots
- Add technologies
- Add industry
- Edit/delete project

Careers

- Add job

- Edit job
- Close job
- View applications

Enquiries

- View lead
 - Update status
 - Assign team member
 - Add notes
-

34. Lead Management — Advanced

Create a basic CRM-style enquiry system.

Example:

New Lead

Contacted

Qualified

Proposal

Converted

Each lead should contain:

- Name
 - Company
 - Service
 - Budget
 - Timeline
 - Status
 - Date
 - Assigned employee
-

35. Suggested Navigation

Home
Services
Solutions
Industries
Portfolio
Products
Technologies
About
Careers
Blog
Contact

Primary CTA:

Start a Project

Secondary CTA:

View Our Work

36. Project Folder Structure

it-company-website/

|— case-study.html
|— products.html
|— product-details.html
|— technologies.html
|— team.html
|— careers.html
|— job-details.html
|— blog.html
```

```
├── blog-details.html
├── faq.html
├── contact.html
├── start-project.html
├──
├── css/
│   └── style.css
├── js/
│   ├── main.js
│   ├── services.js
│   ├── portfolio.js
│   ├── careers.js
│   ├── estimator.js
│   └── validation.js
├── images/
│   ├── hero/
│   ├── services/
│   ├── projects/
│   ├── products/
│   ├── team/
│   └── blog/
└── README.md
```

37. GitHub Requirements

Interns must use Git/GitHub.

Example commits:

- Initial project setup
- Created corporate navbar
- Created homepage
- Added services section
- Created services page
- Added portfolio
- Implemented portfolio filtering
- Created case study page
- Added technology section
- Created careers page

Added job application form
Created contact page
Implemented form validation
Added responsive design
Optimized website performance
Final testing

38. README Requirements

README must contain:

- Project name
 - Project objective
 - Features
 - Technologies
 - Installation instructions
 - Folder structure
 - Screenshots
 - Database setup
 - GitHub URL
 - Live URL
 - Developer information
 - Future improvements
-

39. Deliverables

Every intern must submit:

1. Complete source code
 2. GitHub repository
 3. Live deployed website
 4. README
 5. Screenshots
 6. Database file, if applicable
 7. Project report
 8. Final presentation/demo
-

40. Evaluation — 100 Marks

Category	Marks
UI/UX & Corporate Design	15
Services & Solutions	15
Portfolio / Case Studies	10
JavaScript Functionality	15
Lead Generation Forms	10
Careers Module	10
Responsive Design	10
SEO & Performance	5
Git/GitHub	5
Documentation	5
Total	100

41. Minimum Requirements to Pass

The website must include:

- Professional homepage
- Services
- Service details
- Solutions
- Industries
- Portfolio
- Case studies
- Technologies
- Team
- Careers
- Contact
- Project enquiry
- Search/filter functionality
- JavaScript interactions

- Form validation
- Responsive design
- Basic SEO
- GitHub repository
- Live deployment
- README

A website consisting only of static company information **will not be considered a complete IT Company Website project.**

42. Final User Journey

Final Intern Assignment

Build a professional, responsive and functional IT Company Website that presents the company's services, solutions, industries, technologies, products, portfolio, case studies, team and career opportunities while providing a complete project-enquiry and lead-generation workflow. The project must demonstrate practical HTML/CSS, JavaScript, responsive UI/UX, SEO, performance optimization and real-world corporate web development practices.

Recommended duration: 10–14 days, with progress reviews during development and a final project demonstration.
